

361 Managed Futures Strategy Fund | 1Q17

I: AMFZX | Investor: AMFQX

361 CAPITAL

Portfolio Diversification

Alternative mutual fund with low correlations to broad markets offering true diversification.

Positive Absolute Returns

Fund seeks consistent, positive returns across all market cycles.

Contrarian Approach

Counter-trend approach seeks to profit from short-term price extremes independent of market direction.

Objective

Seeks positive absolute returns that have a low correlation to the returns of broad stock and bond markets.

Strategy

Follows a proprietary investment methodology that employs systematic trading models that take positions (long, short or cash) in U.S. equity index futures.

About 361 Capital

361 Capital is a leading boutique asset manager focused on delivering an array of distinctive strategies to institutions, advisors and their clients. Founded in 2001, the Firm specializes in creating innovative portfolio solutions using behavioral-driven, quantitative methods designed to monetize behavioral biases and market factors in order to pursue consistent alpha for client portfolios.

Fund Hit Ratio

Market Commentary

The lack of activity resulting in lower-than-average market exposure for the first quarter is attributed to the domestic market environment, particularly the Nasdaq 100 (NDX). Specifically, breaking a record for any quarter in the history of the index, the NDX moved largely in one direction gaining on an unprecedented 71% of trading days during the quarter. The S&P broke a record as well, realizing a 50-year low in volatility. Given this unprecedented market environment the Fund performed in-line with expectations for the first quarter. Much of the mediocre performance in longer timeframes can be explained by similar albeit less extreme environmental headwinds.

† Hit Ratio is the number of winning active signals divided by the number of total active signals. The average exposure per trade for the quarter ended March 31, 2017 was 30%.

You should consider the Fund's investment objectives, risks, charges and expenses carefully before investing. For a prospectus, or summary prospectus, that contains this and other information about the Funds, call 1-888-736-1227 or visit our website at www.361capital.com. Please read the prospectus or summary prospectus carefully before investing.

Investing involves risk, including possible loss of principal. Futures prices may be very volatile. The small margin required for futures contracts magnifies the effect of market volatility and allows the loss from a contract potentially to exceed the Fund's initial investment. With short contracts, the loss is theoretically unlimited since the appreciation of the underlying asset also is theoretically unlimited. Fund assets not invested in futures are invested primarily in investment-grade bonds. Bond prices generally fall when interest rates rise. Frequent trading by the Fund may reduce returns and increase the number of taxable transactions. Concentration of its portfolio in relatively few issuers may make the Fund more volatile than a diversified fund.

The **Citigroup 3 Month T-Bill Index** measures monthly return equivalents of yield averages that are not marked to market. The Three-Month Treasury Bill Indexes consist of the last three three-month Treasury bill issues. **Morningstar Managed Futures Category** is defined as funds that primarily trade liquid global futures, options, swaps, and foreign exchange contracts, both listed and over-the-counter. More than 60% of the fund's exposure is invested through derivative securities. These funds obtain exposure primarily through derivatives; the holdings are largely cash instruments. It is not possible to invest directly in an index.

Standard Deviation is a statistical measurement of performance fluctuations. Generally, the higher the standard deviation, the greater the expected volatility of returns. **Alpha** measures the difference between a fund's actual and expected returns, based on beta, and is generally used as a measure of a manager's added value over a passive strategy. **Beta** measures a fund's sensitivity to market movements. The beta of a market is 1.00 by definition. **Sharpe Ratio** is a ratio developed to measure risk-adjusted performance. **Correlation** is a statistical measure of how two securities perform relative to each other.

The 361 Funds are distributed by IMST Distributors, LLC.
