

**361 Managed Futures Strategy Fund**  
**Investor Class Shares (AMFQX)**  
**Class I Shares (AMFZX)**

**Summary Prospectus**

**March 1, 2017**

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's statutory Prospectus and Statement of Additional Information and other information about the Fund online at <http://361capital.com/all-products/361-managed-futures-strategy-fund/>. You may also obtain this information at no cost by calling 888-736-1227 (888-7361CAP) or by sending an e-mail request to [info@361Capital.com](mailto:info@361Capital.com). The Fund's Statutory Prospectus and Statement of Additional Information, both dated March 1, 2017, as each may be further amended or supplemented are incorporated by reference into this Summary Prospectus.

**Investment Objective**

The investment objective of the 361 Managed Futures Strategy Fund (the "Fund") is to seek positive absolute returns that have a low correlation to the returns of broad stock and bond markets.

**Fees and Expenses of the Fund**

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

	<b>Investor Class Shares</b>	<b>Class I Shares</b>
<b>Shareholder Fees</b> <i>(fees paid directly from your investment)</i>		
Maximum sales charge (load) imposed on purchases	None	None
Maximum deferred sales charge (load)	None	None
Redemption fee if redeemed within 90 days of purchase	None	None
Wire fee	\$20	\$20
Overnight check delivery fee	\$25	\$25
Retirement account fees (annual maintenance fee)	\$15	\$15
<b>Annual Fund Operating Expenses</b> <i>(expenses that you pay each year as a percentage of the value of your investment)</i>		
Management fees	1.57%	1.57%
Distribution and service (Rule 12b-1) fees	0.25%	None
Other expenses	0.29%	0.29%
Shareholder service fee	0.10%	0.10%
All other expenses	0.19%	0.19%
Acquired Fund Fees and Expenses	0.02%	0.02%
<b>Total annual fund operating expenses<sup>1</sup></b>	<b>2.13%</b>	<b>1.88%</b>
Fees waived and/or expenses reimbursed <sup>2</sup>	(0.01)%	(0.01)%
<b>Total annual fund operating expenses after waiving fees and/or reimbursing expenses<sup>1,2</sup></b>	<b>2.12%</b>	<b>1.87%</b>

1 The total annual fund operating expenses and total annual fund operating expenses after fee waiver and/or expense reimbursement do not correlate to the ratio of expenses to average net assets appearing in the financial highlights table, which reflects only the operating expenses of the Fund and does not include acquired fund fees and expenses.

2 The Fund's advisor has contractually agreed to waive its fees and/or pay for operating expenses of the Fund to ensure that total annual fund operating expenses (excluding any taxes, leverage interest, acquired fund fees and expenses as determined in accordance with SEC Form N-1A, dividend and interest expense on short sales, brokerage commissions, expenses incurred in connection with any merger or reorganization and extraordinary expenses such as litigation expenses) do not exceed 2.24% and 1.99% of the average daily net assets of the Fund's Investor Class and Class I shares, respectively. This agreement is in effect until February 28, 2018, and it may be terminated before that date only by the Trust's Board of Trustees. The Fund's advisor is permitted to seek reimbursement from the Fund, subject to certain limitations, of fees waived or payments made to the Fund for a period ending three full fiscal years after the date of the waiver or payment.

### **Example**

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same.

Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	<b>One Year</b>	<b>Three Years</b>	<b>Five Years</b>	<b>Ten Years</b>
Investor Class shares	\$215	\$666	\$1,143	\$2,461
Class I shares	\$190	\$590	\$1,015	\$2,200

### **Portfolio Turnover**

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 17% of the average value of its portfolio.

### **Principal Investment Strategies**

In pursuing the Fund's investment objective, the Advisor employs a set of quantitative models to make investment decisions. Using a combination of market inputs, these models systematically identify when to purchase and sell specific investments for the Fund. The Advisor uses these models for the purpose of seeking to achieve favorable returns for the Fund from short-term movements in various U.S. and foreign markets. The Advisor may also use other quantitative models that focus on longer term market trends rather than on identifying short-term purchase and sale opportunities. The Advisor may also base purchase and sale decisions for the Fund on its judgment regarding various market and economic factors rather than its quantitative models.

In pursuing its investment objective, the Fund will primarily seek to establish both long and short positions in futures contracts on various U.S. and foreign equity indices. However, the Advisor's quantitative models will seek to identify periods during which the Fund should not enter into futures contracts. Accordingly, there will be significant periods of time during which the Fund will not hold any long or short futures positions. The Fund will be required to use a portion of its assets as margin for the Fund's futures positions. The amount of margin will be based on the notional value of the futures contracts held by the Fund. The Advisor allocates the Fund's assets not invested in futures or used as margin to a fixed income strategy that invests primarily in investment grade fixed income securities in order to generate interest income. These investments may include collateralized mortgage obligations, which are a type of mortgage-backed security. The Advisor delegates management of the Fund's fixed income strategy portfolio to Federated Investment Management Company (the "Sub-Advisor"). The Fund's overall portfolio duration is expected to be less than one year with a weighted average maturity of less than two years.

The Fund may hold fixed income securities during periods when the Fund is already invested in futures positions, when the Fund is not invested in futures positions, or as needed to comply with current SEC guidance relating to asset coverage for derivatives investments held by investment companies. As a result, a substantial portion of the Fund's portfolio may be invested in instruments other than futures contracts. While those other investments may contribute to the Fund's performance, the Advisor expects that over time a majority of the Fund's performance will be attributable to the Fund's futures positions.

The Fund may also write put and call options and purchase put and call options on futures, securities indices and shares of ETFs. The Fund may purchase or write options in combination with each other (i.e., simultaneously writing call options and purchasing put options) to adjust the risk and return of its overall investment positions. Futures contracts and put and call options are among the types of instruments commonly referred to as derivatives.

The Fund is classified as a "non-diversified" fund under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in fewer positions than "diversified" mutual funds.

### **Principal Risks**

Risk is inherent in all investing. A summary description of certain principal risks of investing in the Fund is set forth below. Before you decide whether to invest in the Fund, carefully consider these risk factors associated with investing in the Fund, which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objective.

**Derivatives risk.** Derivatives include instruments and contracts that are based on and valued in relation to one or more underlying securities, financial benchmarks, indices, or other reference obligations or measures of value. Major types of derivatives include futures, options, swaps and forward contracts. Depending on how the Fund uses derivatives and the relationship between the market value of the derivative and the underlying instrument, the use of derivatives could increase or decrease the Fund's exposure to the risks of the underlying instrument. Using derivatives can have a leveraging effect and increase fund volatility. A small investment in derivatives could have a potentially large impact on the Fund's performance. Derivatives transactions can be highly illiquid and difficult to unwind or value, and changes in the value of a derivative held by the Fund may not correlate with the value of the underlying instrument or the Fund's other investments. Many of the risks applicable to trading the instruments underlying derivatives are also applicable to derivatives trading. However, additional risks are associated with derivatives trading that are possibly greater than the risks associated with investing directly in the underlying instruments. These additional risks include, but are not limited to, illiquidity risk and counterparty credit risk. For derivatives that are required to be cleared by a regulated clearinghouse, other risks may arise from the Fund's relationship with a brokerage firm through which it submits derivatives trades for clearing, including in some cases from other clearing customers of the brokerage firm. The Fund would also be exposed to counterparty risk with respect to the clearinghouse. Financial reform laws have changed many aspects of financial regulation applicable to derivatives. Once implemented, new regulations, including margin, clearing, and trade execution requirements, may make derivatives more costly, may limit their availability, may present different risks or may otherwise adversely affect the value or performance of these instruments. The extent and impact of these regulations are not yet fully known and may not be known for some time.

**Fixed income securities risk.** The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer's credit rating or market perceptions about the creditworthiness of an issuer. Generally fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall, and longer-term and lower rated securities are more volatile than shorter-term and higher rated securities. Recent and potential future changes in monetary policy made by central banks and/or their governments are likely to affect the level of interest rates.

**Mortgage-backed securities risk.** Mortgage-backed securities represent interests in "pools" of mortgages. Mortgage-backed securities are subject to "prepayment risk" (the risk that borrowers will repay a loan more quickly in periods of falling interest rates) and "extension risk" (the risk that borrowers will repay a loan more slowly in periods of rising interest rates). If the Fund invests in mortgage-backed securities that are subordinated to other interests in the same pool, the Fund may only receive payments after the pool's obligations to other investors have been satisfied. An unexpectedly high rate of defaults on the assets held by a pool may limit substantially the pool's ability to make payments of principal or interest to the Fund, reducing the values of those securities or in some cases rendering them worthless. The risk of such defaults is generally higher in the case of mortgage pools that include so-called "subprime" mortgages. Collateralized mortgage obligations generally entail greater market, prepayment and liquidity risk than other mortgage-backed securities. For example, their prices are more volatile and their trading market may be more limited.

**Leveraging risk.** Certain Fund transactions, including entering into futures contracts and taking short positions in financial instruments, may give rise to a form of leverage. Leverage can magnify the effects of changes in the value of the Fund's investments and make the Fund more volatile. Leverage creates a risk of loss of value on a larger pool of assets than the Fund would otherwise have had, potentially resulting in the loss of all assets. The Fund may also have to sell assets at inopportune times to satisfy its obligations in connection with such transactions.

**Asset segregation risk.** As a series of an investment company registered with the SEC, the Fund must segregate liquid assets, or engage in other measures, to "cover" open positions with respect to certain kinds of derivatives and short sales. The Fund may incur losses on derivatives and other leveraged investments (including the entire amount of the Fund's investment in such investments) even if they are covered.

**Futures risk.** The value of a futures contract tends to increase and decrease in correlation with the value of the underlying instrument. Risks of futures contracts may arise from an imperfect correlation between movements in the price of the instruments and the price of the underlying securities. The Fund's use of futures contracts (and related options) exposes the Fund to leverage risk because of the small margin requirements relative to the value of the futures contract. A relatively small market movement will have a proportionately larger impact on the funds that the Fund has deposited or will have to deposit with a broker to maintain its futures position. Leverage can lead to large losses as well as gains. While futures contracts are generally liquid instruments, under certain market conditions they may become illiquid. Futures exchanges may impose daily or intraday price change limits and/or limit the volume of trading. Additionally, government regulation may further reduce liquidity through similar trading restrictions. As a result, the Fund may be unable to close out its futures contracts at a time that is advantageous. The price of futures can be highly volatile; using them could lower total return, and the potential loss from futures could exceed the Fund's initial investment in such contracts.

**Government intervention and regulatory changes.** In response to the global financial crisis that began in 2008, which caused a significant decline in the value and liquidity of many securities and unprecedented volatility in the markets, the U.S. government and the Federal Reserve, as well as certain foreign governments and their central banks have taken steps to support financial markets, including by keeping interest rates low. The withdrawal of this support, failure of efforts in response to the crisis, or investor perception that such efforts are not succeeding could negatively affect financial markets generally as well as reduce the value and liquidity of certain securities. In addition, policy and legislative changes in the United States and in other countries are affecting many aspects of financial regulation. In this regard, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) has significantly enhanced the rulemaking, supervisory and enforcement authority of federal bank, securities and commodities regulators. These regulators are continuing to implement regulations under the Dodd-Frank Act, some which may adversely affect the Fund. For example, major changes under the Dodd-Frank Act or other legislative or regulatory actions could materially affect the profitability of the Fund or the value of investments made by the Fund or force the Fund to revise its investment strategy or divest certain of its investments. Any of these developments could expose the Fund to additional costs, taxes, liabilities, enforcement actions and reputational risk. The SEC is reviewing its current guidance on the use of derivatives by registered investment companies, such as the funds, and may issue new guidance. It is not clear whether or when such new guidance will be published or what the content of such guidance may be, although in 2015 the SEC proposed a new rule related to such derivatives use. Whether and when this proposed rule will be adopted and its potential effects on the funds are unclear. The regulation of commodity and derivatives transactions in the United States is a rapidly changing area of law and is subject to ongoing modification by government, self-regulatory and judicial action. The effect of any future regulatory change on the fund is impossible to predict, but could be substantial and adverse to the funds.

The Dodd-Frank Act has established a new regulatory structure for derivatives. If more restrictive position limits are imposed on investors in the commodity futures and other derivative markets, the Fund may be adversely affected. Similarly, changes in the regulation of foreign currency-related trading arising from the Dodd-Frank Act may make such trading more expensive for the Fund, and otherwise limit the Fund’s ability to engage in such trading, which could adversely affect the Fund.

The Advisor is registered as a commodity pool operator under the Commodity Exchange Act. As a registered commodity pool operator, the Advisor is subject to a comprehensive scheme of regulations administered by the CFTC and the National Futures Association, the self-regulatory body for futures and swaps firms (the “NFA”), with respect to both its own operations and those of the Fund. The CFTC has determined that many of its disclosure and reporting requirements that otherwise apply to registered commodity pools will not apply with respect to commodity pools that are SEC-registered investment companies, like the Fund.

**Market risk.** The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions, throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry.

**Equity risk.** The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or factors relating to specific companies in which the Fund invests.

**Short sales risk.** In connection with a short sale of a security or other instrument, the Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise. If the price of the security or other instrument sold short increases between the date of the short sale and the date on which the Fund replaces the security or other instrument borrowed to make the short sale, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase. Shorting options or futures may have an imperfect correlation to the assets held by the Fund and may not adequately protect against losses in or may result in greater losses for the Fund’s portfolio.

**Foreign investment risk.** The prices of foreign securities may be more volatile than the prices of securities of U.S. issuers because of economic and social conditions abroad, political developments, and changes in the regulatory environments of foreign countries. In addition, changes in exchange rates and interest rates may adversely affect the values of the Fund’s foreign investments. Foreign companies are generally subject to different legal and accounting standards than U.S. companies, and foreign financial intermediaries may be subject to less supervision and regulation than U.S. financial firms.

**Currency risk.** The values of investments in securities denominated in foreign currencies increase or decrease as the rates of exchange between those currencies and the U.S. Dollar change. Currency conversion costs and currency fluctuations could erase investment gains or add to investment losses. Currency exchange rates can be volatile and are affected by factors such as general economic conditions, the actions of the United States and foreign governments or central banks, the imposition of currency controls, and speculation.

**Management and strategy risk.** The value of your investment depends on the judgment of the Fund’s advisor about the quality, relative yield, value or market trends affecting a particular security, industry, sector or region, which may prove to be incorrect. Investment strategies employed by the Fund’s advisor in selecting investments for the Fund may not result in an increase in the value of your investment or in overall performance equal to other investments.

**Non-diversification risk.** The Fund is classified as “non-diversified,” which means the Fund may invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund. Investment in securities of a limited number of issuers exposes the Fund to greater market risk and potential losses than if its assets were diversified among the securities of a greater number of issuers.

### Performance

The bar chart and table below provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year for Class I shares and by showing how the average annual total returns of each class of the Fund compare with the average annual total returns of a broad-based market index. The Fund’s past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. The bar chart shows the performance of the Fund’s Class I shares. Investor Class shares’ performance would be lower than the Fund’s Class I shares because of the higher expenses paid by Investor Class shares. Updated performance information is available on the Fund’s website at [www.361funds.com](http://www.361funds.com).

### Calendar-Year Total Return (before taxes) for Class I Shares

For each calendar year at NAV

<b>Class I</b>		
Highest Calendar Quarter Return at NAV	8.15%	Quarter Ended 06/30/2012
Lowest Calendar Quarter Return at NAV	(5.05)%	Quarter Ended 09/30/2015

<b>Average Annual Total Returns</b> <i>(for periods ended December 31, 2016)</i>	<b>Since Inception (December 20, 2011)</b>		
	<b>1 year</b>	<b>5 years</b>	
<b>Class I</b> — Return Before Taxes	(0.81)%	3.59%	3.28%
<b>Class I</b> — Return After Taxes on Distributions*	(0.81)%	3.25%	2.94%
<b>Class I</b> — Return After Taxes on Distributions and Sale of Fund Shares*	(0.46)%	2.74%	2.49%
<b>Investor Class</b> — Return Before Taxes	(1.00)%	3.35%	3.04%
Citigroup 3-month T-Bill Index (Reflects No Deductions for Fees, Expenses or Taxes)	0.27%	0.09%	0.09%

\* After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. After-tax returns are shown for Class I Shares only and after-tax returns for classes other than Class I will vary from returns shown for Class I.

### Investment Advisor

361 Capital, LLC is the Fund’s investment advisor.

### Sub-Advisor

Federated Investment Management Company is the Fund’s sub-advisor (“Federated” or the “Sub-Advisor”).

### **Portfolio Managers of the Advisor**

Blaine Rollins, CFA, Managing Director, and Jeremy Frank, Managing Director have served as portfolio managers of the Fund since its inception on December 20, 2011. Clifford Stanton, CFA, Chief Investment Officer, Aditya Bhawe, Analyst have served as portfolio managers of the Fund since December 4, 2014. Jason Leupold, Vice President of Trading and Research has served as portfolio manager of the Fund since March 1, 2017. They have been jointly and primarily responsible for the day-to-day management of the Fund's portfolio.

### **Portfolio Manager of the Sub-Advisor**

Randall S. Bauer, CFA, Senior Vice President and Senior Portfolio Manager, has been the portfolio manager of the Fund and primarily responsible for the day-to-day management of the fixed income strategy of the Fund's portfolio since October 1, 2014.

### **Purchase and Sale of Fund Shares**

To purchase shares of the Fund, you must invest at least the minimum amount.

<b>Minimum Investments</b>	<b>To Open Your Account</b>	<b>To Add to Your Account</b>
<b>Investor Shares</b>		
Direct Regular Accounts	\$2,500	None
Direct Retirement Accounts	\$2,500	None
Gift Account For Minors	\$2,500	None
<b>Class I Shares</b>		
All Accounts	\$100,000	None

Fund shares are redeemable on any business day the New York Stock Exchange (the "NYSE") is open for business by written request or by telephone.

### **Tax Information**

The Fund's distributions are generally taxable, and will ordinarily be taxed as ordinary income or capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. Shareholders investing through such tax-advantaged arrangements may be taxed later upon withdrawal of monies from those arrangements.

### **Payments to Broker-Dealers and Other Financial Intermediaries**

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
